

## Nic Blake and the Remarkables

By Angie Thomas

*Nic Blake And The Remarkables* by Angie Thomas takes place in a forest (backyard) where the main character is tiptoeing in the forest searching for a hellhound. Then she finds one, a hellhound, it has fur and horns, which means it is a girl. Then the dad surprises her with a happy birthday! She went inside and now she is in her house then they drive to the city. They are Manifestors – Black people who have the Gift within them – and who can see vampires, werewolves and all kinds of Remarkables.

The main character is Nic Blake and she is a dynamic character in my book "Nic Blake And The Remarkables". She is dynamic because in the beginning of my book she is a normal human but later in the book she gets magic powers and handles it like it was nothing. Nic Blake is kind, magical, intelligent, and has feelings for dogs that look like hellhounds. No one can see it because for other people the dog just looks like a normal dog. A secondary character is JB. JB was one of Nic Blake's first friends, which is why they do all the stuff together. JB is kind, has glasses, and is really intelligent.

The main problem with my story is that there are vampires, werewolves, ghosts, and other remarkables. She wants them to go away so she starts getting her friends and starts to fight in unique ways. It was not easy to defeat all the remarkables and it took a while, but she found her way into the dragon's lair and defeated the dragon so now there are no more remarkables.

The name of my book is Nic Blake And The Remarkables. The themes in my story are friendship, kindness, teamwork, adventurous, and smart. She needs her friends to help her because she is smart but her friends are smarter and one of them has glasses with abilities, she likes to go on adventures, and they are all kind which is why they are kind.

I have a lot of opinions about my book (Nic Blake And The Remarkables), some positive and some negative. One thing that I liked was how the characters had to really work hard to solve the problems instead of getting it instantly.
